

1 **(August 4, 2003)**

2 **Type III Barricade**

3 The barricades shall be constructed in accordance with the details shown in the
4 MUTCD and the Standard Plans. The barricade width shall be 8 feet unless
5 otherwise specified in the contract plans. If it is necessary to add mass to
6 barricades for stability, only bags of sand that will rupture on impact shall be used.
7 The bags of sand shall:

8
9 Be furnished by the Contractor.

10 Have a maximum mass of 40 pounds.

11 Be placed no more than 1 foot above the ground.

12
13 As may be indicated in the Signing Plan or Traffic Control Plan, the Contractor may
14 be required to install signs, warning lights, or both, on barricades.
